Instructions & Execution Guide

TENNIS SIMULATION PROJECT

Group 2

1. System Prerequisites

Java Environment
JDK 17 or higher (standard Java SE)

Recommended IDE
IntelliJ IDEA (Community or Ultimate)

2. Step-by-Step Execution Guide

1. **Extract Archive:** Extract the submitted archive `Group2_Project_TennisSimulation.zip` to any directory on your computer.

2. **Open in IntelliJ IDEA:** Launch IntelliJ, select **File → Open...**, and choose the extracted project folder. Allow IntelliJ a few moments to index the project.

3. **Locate Entry Point:** In the Project tool window (left panel), navigate to `src/Main.java` (or the main application class).

4. **Run the Simulation:** Right-click on `Main.java` and choose **Run 'Main.main()'** (or click the green **Run** play button next to the class declaration).

3. Execution Details & Notice

Autonomous Simulation: Once started via the **Run** button, the tennis simulation executes automatically. Output and game progress are displayed directly in the output window / console without requiring manual key inputs or complex external setup. No additional plugins or non-standard packages need to be installed.
